

Mark Allen

Kermit,* and remarkably good in the flesh from newbie builder Mark. Extraordinarily weighing in at just 351g x battery too!

Another Kfm-2 airfoil variation...it's sort of 1/2 of one and in this rendition with a square section leading edge. After initial trials the leading edge is getting treatment.

Credit to Ken Seymour's Model Emporium for supplying fluorescent green Solarfilm and fetching Royal Purple contrasting covering.

We were lucky enough to see this on-site yesterday.

This colour scheme has to be the best yet against a clear blue sky.

Click on the following image to see a brief video of the successful maiden launch launch:

*Kermit no more.

Mark has undertaken a re-branding exercise which seems to be based on his favourite condiment.

In addition:

- Sculpted the leading edge
- Wing and tail now aligned horizontally
- ESC moved to the firewall
- Ailerons re-aligned
- Wooden control surfaces available should I need them.

Not sure why the helipad tail markings...
