

# Dave Last

Just a couple, well, three photos of the Wacky Racer. It is the Army Surplus special No 6.

Foam cut wing to the profile from the plan, covered with 13/2 balsa wood.

5mm foam fuselage with 1/16 balsa wood Doublers.  
Balsa ailerons, leading edge, and wing tips. Standard  
motor 9X6 Prop. 1400 mah battery.

The whole thing is covered with solar film.

Standard motor, 9X6 Prop & 1400 mah battery (140g)  
yields a flying weight of 550g.

Fly's well, but needs a bit more fine tuning.  
Gets very small very quickly.
