

# Google Chrome Notifications from the BMFC Website

Information courtesy of Google Chrome Help. I was able to make it work only by restarting my laptop after making the changes suggested:

## Use notifications to get alerts

You can set up Chrome to get notifications, such as meeting reminders, from websites, apps and extensions.

If you get pop-ups or ads, [learn how to block or allow pop-ups](#).

[\(The original of this document from Google Chrome allows you to select your device. The following is for a Computer\):](#)

## How notifications work

By default, Chrome alerts you whenever a website, app or extension wants to send you notifications. You can change this setting at any time.

When you browse sites with intrusive or misleading notifications, Chrome automatically blocks notifications and recommends that you continue to block these notifications.

If you [browse privately](#), you won't get notifications.

## Change your default notifications settings

1. On your computer, open **Chrome**.
2. At the top right, click More (three vertical dots)> **Settings**.
3. Click Privacy and security > Site settings > Notifications.
4. Select the option that you want as your default setting.
  - Block a site:
    - Next to 'Not allowed to send notifications', click **Add**.
    - Enter the site's web address.
    - Click **Add**.
  - Allow a site:
    - Next to 'Allowed to send notifications', click **Add**.
    - Enter the site's web address.
    - Click **Add**.
  - Allow quieter notification prompts:
    - Allow sites to ask to send notifications.
    - Click Use quieter messaging.
      - This blocks notification prompts from interrupting you. A website can still ask you to allow notifications, but no pop-up prompt will show. Instead, you will only find a bell icon next to the website's address. You can click the bell to allow access.

You can also [block any sites or apps from sending you notifications](#).

Tips:

- If you allow notifications for a site that Chrome has marked as abusive or misleading, Chrome may block these notifications and require the site to request your permission again. You can change the setting to allow notifications.
- From time to time, Chrome will remind you to review your notification permissions.
